 nn
   5000 -
   2500 -
                          25
                                           50
                                                            75
                                                                             100
                                      hourly_calls
Looks like the CAD export didn't include any 0-call hours. I'll have to re-export to make sure we get those.
Or just interpolate
 all_hours <- tibble(Date = seq.POSIXt(from = min(vol$Date),</pre>
                                 to = max(vol$Date),
                                 by = 'hour')
                  ) #Makes a vector of all date/hours in the dataset
 vol <- vol %>%
  full_join(all_hours) %>% #Joins with existing dataset
  replace_na(replace = list(n = 0))#A result of the full join is NA where there isn't a match, so this replaces NA with 0
 ## Joining, by = "Date"
Look again for hourly call distributions
 vol %>%
   count(hourly_calls = n) %>%
  ggplot(aes(hourly_calls, nn)) +
  geom_col()
   12500 -
   10000 -
   7500 -
 nn
   5000 -
   2500 -
      0 -
                                            50
                           25
                                                            7<sub>5</sub>
                                                                             100
                                      hourly_calls
Poisson distribution?
What's with the super busy hours?
 vol %>%
  filter(n > 40)
 ## # A tibble: 5 x 2
     Date
                         n
                      <dbl>
     <dttm>
 ## 1 2012-01-01 01:00:00
                        43
 ## 2 2015-11-01 01:00:00
 ## 3 2018-03-05 00:00:00
 ## 4 2018-03-05 05:00:00
 ## 5 2018-03-13 00:00:00
2012-01-01 01:00 I suspect this may be legit (new years' eve)
2015-11-01 01:00 is a suprise
2018-03-05 00:00 Near a CAD downtime, likely catching up from previous hours.
2018-03-05 05:00 Near a CAD downtime, likely catching up from previous hours.
2018-03-13 00:00 Near a CAD downtime, likely catching up from previous hours.
For the last three or four we may have to figure out a way to deal with these.
 vol %>%
